SPEECH, HEARING & REHABILITATION TECHNOLOGY

Support for every listening journey.

Speech And Hearing Technologies brings together purpose-built software and therapy support for speech development, cochlear implant rehabilitation, and tinnitus diagnostics and management.

Our focus
Making specialist resources easier to explore, understand, and use alongside professional care.

For
Clinics · professionals · individuals · families

Our service areas

01 Speech therapy software

Interactive software resources to support speech and language practice with guidance from a speech-language professional.

02 Cochlear implant rehabilitation

Rehabilitation support and listening practice resources for people with cochlear implants and their families.

03 Tinnitus diagnostics & management

Tools and therapy support to help clinicians assess tinnitus and guide individual management conversations.

A thoughtful way forward

Every person’s communication and hearing journey is different. Start with a conversation about the service, software, or information you need. Our team can explain available resources and arrange a product discussion.
